HEALTH INSURANCE STATISTICS

Releases in the Health Insurance Statistics series are designed to present current data from the Medicare program. Two series have been initiated to date—the Health Insurance (HI) series and the Current Medicare Survey (CMS) series which presents current data from a survey of a sample of the Medicare population. The releases include:

Health Insurance Notes

<i>Number</i>	<i>Title</i>	<i>Date</i>
HI-51	Utilization and Reimbursements Under Medicare for Persons Who Died in 1967 and 1968	October 17, 1973
HI-50	Short-Stay Hospitals Under Medicare, 1969: Use and Charges, By Major Discharge Diagnosis, 1969	August 17, 1973
HI-49	Health Insurance for the Aged: Persons Meeting the SMI Deductible, 1966-70	August 2, 1973
HI-48	Medicare: Participating Health Facilities, July 1972	July 20, 1973

Foreword

THE AMOUNTS REIMBURSED under the two parts of the Medicare program—hospital insurance and supplementary medical insurance—have been published annually by county since the inception of the program in July 1966. This is the second report to publish a derived ratio for each county, based on the reimbursement data standardized for the age and sex distribution of the county population. This ratio, a “geographic index,” provides a comparison of per capita county reimbursements under Medicare with the national average.

The concepts of the “geographic index” and the basic “age-sex index” were developed in the Office of the Actuary, and the tables prepared in the Bureau of Data Processing with the cooperation of the Office of Research and Statistics.

Geographic Index of Reimbursement by State and County, 1970

The Medicare program was enacted on July 30, 1965, as Title XVIII of the 1965 Social Security amendments (Public Law 89-97) and became effective July 1, 1966. The program makes available two separate but coordinated coverages—hospital insurance (HI), covering nearly all persons aged 65 and over, and supplementary medical insurance (SMI) covering those persons in this age group who enroll voluntarily and pay the required premiums.

Annually, amounts reimbursed under the program for enrolled persons in each State and county have been published for both parts of the program. The present report, based on the reimbursement data for 1970, presents a method of comparing the level of per capita reimbursement in each county with that for the country as a whole, as well as with other counties, by means of a geographic index.

Computation of the Index

The objective of the index is to associate with each county a "geographic index of reimbursement" (shortened to "geographic index" in tables 1-3). An index of, say 1.320 for county A and an index of 1.200 for county B would indicate that, independently of the effects of age and sex, the net resultant of all the other influences on reimbursement is a per capita reimbursement level in county A which is 110 percent of the per capita reimbursement level in county B.

In each calendar year the geographic index for "All Areas" is made equal to one so that the county geographic index for that year shows the ratio of the county per capita reimbursement in that year to that of "All Areas." An increase from one year to the next in a county's index does not, of itself, indicate an increase in per capita reimbursement. It indicates only an increase in the *ratio* of the county's per capita reimbursement (adjusted for age and sex) to the corresponding "All Areas" figure.

The influences of age and sex should, if possible, be removed from the geographic index. This is done by,

first, calculating each year for each area an age-sex index. The index measures the extent to which average reimbursement per enrollee in two different areas (or in the same area in two different years) should differ from each other purely because of differences in the proportionate distribution of enrollees by age and sex.

A "standard" relative reimbursement for 5-year age groups for each sex separately was first established by inspection of available data on average reimbursements per person enrolled for "All Areas." The "standards" chosen were rounded, for use in the index computation. A comparison with actual relative reimbursements for 1968 is shown in table A.¹

The method of computing the age-sex index for an area is shown in table B, where it is computed for Alabama. The age-sex index for the area is an average figure reflecting whether it has relatively more, or fewer, persons in the age-sex groups which have a high "standard" relative reimbursement. If one area age-sex index is, say 1.020 and another is 1.002, this means reimbursements per person in the first area would be expected to run 1.018 times those in the second area purely because of differences in the distribution of enrollees by age and sex.

The age-sex indices are designed so that the "All Areas" figure will be in the vicinity of unity. Nevertheless, the figures are independent of any one year's experience. Using the most recently available data, the "All Areas" age-sex indices are:

Age-Sex Indices of Reimbursement—Medicare, All Areas

Year	Supplementary	
	Hospital Insurance	Medical Insurance
1967	0.998	1.002
1968	1.002	1.003
1969	1.005	1.004
1970	1.008	1.005

¹For 1968 data, see Office of Research and Statistics, U.S. Social Security Administration, *Medicare: Health Insurance for the Aged, 1968, Section 1, Summary* (Washington, D.C.: U.S. Government Printing Office), 1973.

<i>Women</i>						
65-69	.65	62,196	40,427	.80	62,138	49,710
70-74	.85	51,609	43,868	.90	50,383	45,345
75-79	1.10	39,189	43,108	1.05	38,500	40,425
80-84	1.40	23,610	33,054	1.15	23,071	26,532
85 and over	1.65	15,545	25,649	1.25	14,826	18,532
Total		325,943	326,275		317,775	317,649
Age-sex index, Alabama	(3 ÷ 2)	=	$\frac{326,275}{325,943}$	Age-sex index, Alabama	(6 ÷ 5)	= $\frac{317,649}{317,775}$
		=	1.001			= 1.000

These indices provide a gross measure of the extent to which the average per capita reimbursement under the Medicare program changes from year to year because of annual changes in the distribution by sex and age of persons enrolled under the program.

The geographic index is the ratio of the per capita reimbursement for a specific area to that for "All Areas" after both figures have been age-sex adjusted. Thus, for Alabama, in 1970:

	HI	SMI
1) Total reimbursements	\$57,529,171	\$22,191,149
2) Reimbursement per person enrolled	\$ 176.50	\$ 69.83
3) Age-sex index (table B)	1.001	1.000
4) Age-sex adjusted reimbursement per person enrolled, (2 divided by 3)	\$ 176.32	\$ 69.83

For "All Areas" in 1970:

	HI	SMI
1) Reimbursement per person enrolled	\$ 232.81	\$ 93.52
2) Age-sex index (table C)	1.008	1.005
3) Age-sex adjusted reimbursement per person enrolled (1 divided by 2)	\$ 230.96	\$ 93.05

The geographic index then for Alabama is the ratio of its adjusted reimbursement to that for "All Areas," or

HI	SMI
\$ 176.32	\$ 69.83
230.96	93.05
= .763	= .750

Source of Data: Qualifications and Limitations

This report uses for each county the enrolled populations and the reimbursement amounts published in an

earlier release.² The calculations of the age-sex index for each area used enrolled populations as of July 1, 1970 for each county by age and sex contained in unpublished tables on file with the Office of Research and Statistics. The enrolled populations by age and sex are published only for political subdivisions larger than a county.³

Qualifications and limitations of the data, as well as the provisions of the Medicare law, are contained in the reimbursement and enrollment reports. Attention is drawn especially to the following:

1. a. Reimbursements are associated with the area in which the covered person resides rather than the area in which the services are rendered.
- b. The statistics refer only to persons 65 and over covered for Medicare benefits and only to amounts paid for those benefits. Geographic indices for younger persons and other benefits would not be the same.
2. In any one calendar year, the relative difference between reimbursements as used for this report and the cost of services rendered in that year can vary considerably from county to county. For any one county, however, the plus and minus differences on this account should balance each other over the years.
3. The geographic indices reflect the composite effect of all those influences, other than age and sex, which produce variation in the per capita reimbursement for medical care. The price unit of care, for instance, is but one of many such influences; the availability of services is another.

Tables

Notes

Health Insurance for the Aged.—The program, commonly known as Medicare, that pays for part of the cost of hospital and medical services for participating persons aged 65 and over.

Geographic Index)
) See text.
Age-Sex Index)

Reimbursement per person enrolled.—Based on reimbursement amounts, and mid-year enrollment shown in an earlier report, "Reimbursement by county, 1970, etc." These figures are *not* adjusted.

Geographic Classifications.—Based on the address to which the enrollee's cash benefit check is being mailed. For persons not receiving such benefits, the mailing address given at the time they applied for health insurance benefits is used. Temporary or permanent changes of residence are reflected in the data to the extent that such changes are reported to the SSA by enrollees.

All Areas: Consists of the United States, Guam, Puerto Rico, Virgin Islands, all other areas, and foreign countries.

United States: Consists of the 50 States, the District of Columbia, and residence unknown.

All Other Areas: Consists of American Samoa, the Canal Zone, Canton Island, Caroline Islands, Mariana Islands, Marshall Islands, Midway Islands, and Wake Island.

County: The primary divisions of the 50 States are, in general, counties. In Louisiana, however, these divisions are known as parishes. Alaska is divided into 21

economic areas, included here as the equivalent of counties. A number of cities that are independent of county organizations are reported separately in Maryland, Missouri, and Virginia. The divisions in Puerto Rico are called municipalities. The District of Columbia, Guam, and the Virgin Islands are not further subdivided.

Metropolitan and Nonmetropolitan Counties: The division of counties into metropolitan and nonmetropolitan groups is based on the list of standard metropolitan statistical areas (SMSA) as classified in 1970 by the Office of Management and Budget. Except in New England, each SMSA includes a county containing a central city of at least 50,000 inhabitants, based on the 1970 census. In addition, contiguous counties are included in the SMSA if they meet certain criteria of economic and social integration with the central city. In New England, an SMSA consists of towns and cities, rather than counties. However, the data included in this report were available only for counties. Therefore, for New England, the SMSA was replaced by the State metropolitan economic area (SMEA), which is defined in terms of whole counties.

Metropolitan counties are those counties included in an SMSA or SMEA. These counties were further divided into those containing at least part of the central city of the SMSA and those not containing any part of the central city. Nonmetropolitan counties are all counties not included in some SMSA or SMEA.

Metropolitan counties are identified by the number of the standard metropolitan statistical area of which they are a part; the number is followed by a C for the central city county.

Table 1. GEOGRAPHIC INDEX, AGE-SEX INDEX, AND AVERAGE REIMBURSEMENT FOR HOSPITAL AND MEDICAL INSURANCE, BY REGION, DIVISION, AND STATE

Other Data Sources on the Health Insurance for the Aged Program

The *Health Insurance Statistics* series is designed to present current, quick-release data from the Medicare Program. Two report series are issued in this format:

The *Health Insurance* (HI) series has included numerous releases since 1967. Issues released prior to 1970 are out of print, but available in many libraries.

The *Current Medicare Survey* (CMS) series is based on data from the continuing Current Medicare Survey.

Future releases in the HI and CMS series may be obtained upon request to the Publications Staff, Office of Research and Statistics, Social Security Administration, Room 1120 Universal North Building, 1875 Connecticut Avenue, N.W., Washington, D.C. 20009.

The *Social Security Bulletin*, published monthly, presents authoritative articles and analyses of medical care expenditures, prices, and utilization as well as current operating statistics from the Medicare program. The *Annual Statistical Supplement* to the *Bulletin* includes summary data on trust funds, services, claims, enrollment, average charges and participating providers of service under Medicare. The *Bulletin*, including the *Supplement*, is available in most libraries and by subscription at \$7 a year from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402

The *Research and Statistics Note* series reports on-going research, preliminary findings or provides addenda to material already published on the old-age, survivors, disability, and health insurance program. Designed to get information quickly into the hands of users, the series includes data on medical care prices, outlays, and expenditures. The series is available in many libraries. Future releases may be obtained upon request to the Publications Staff, Office of Research and Statistics, Social Security Administration, Room 1120, Universal North Building, 1875 Connecticut Avenue, N.W., Washington, D.C. 20009.
